Present Day Dangers

Awareness & Concern

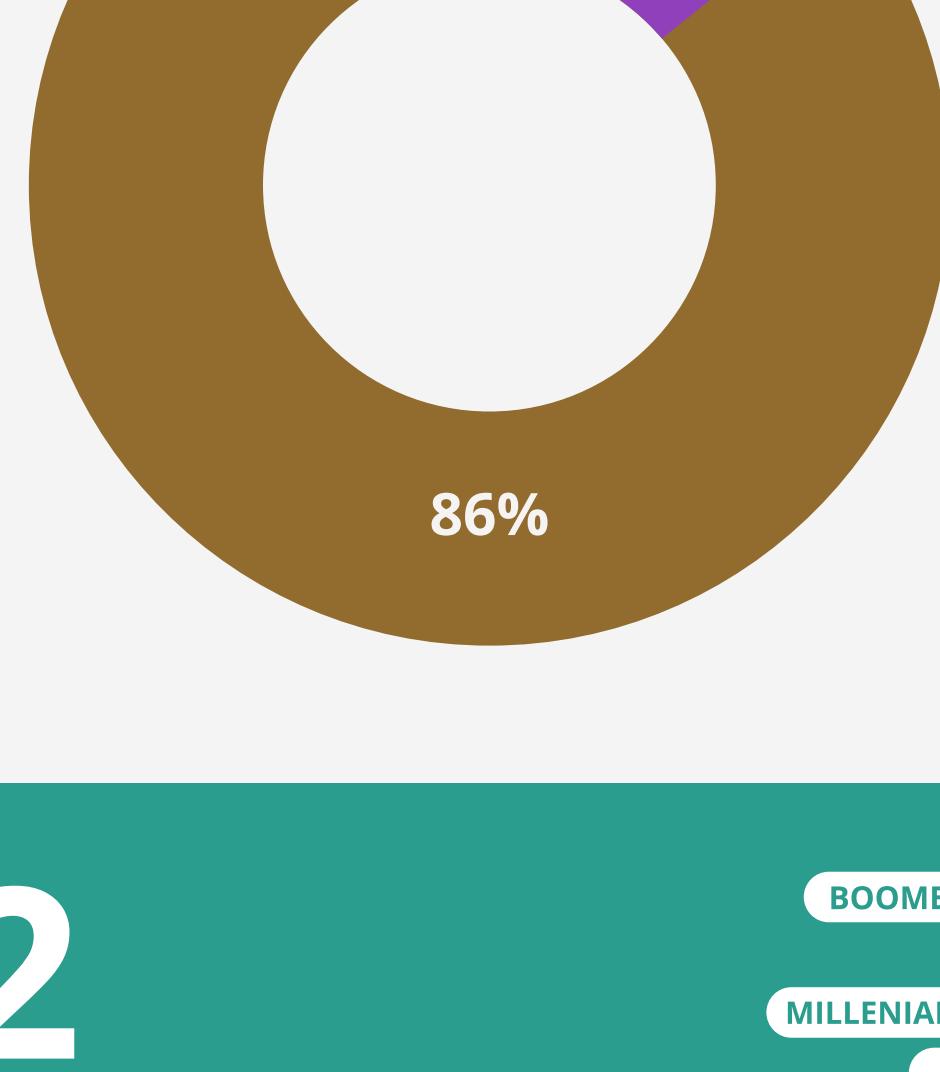

Results of a just-published ResearchScape survey on the dangers of present-day asbestos exposure revealed a **general lack of awareness but rising concern** about the health hazards.

1

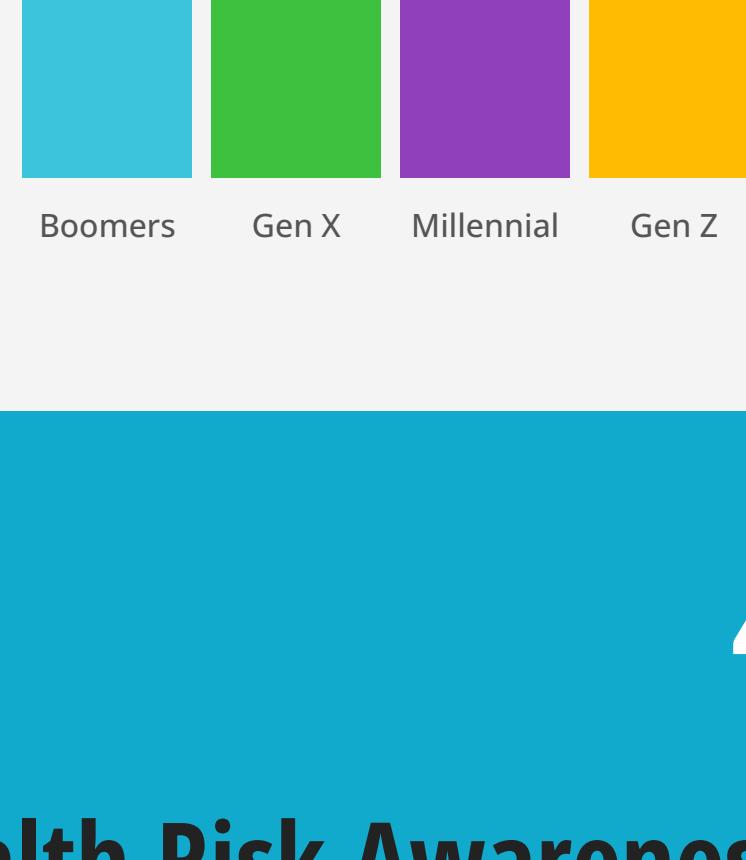

Testing

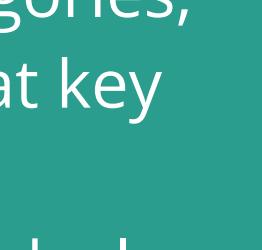

When asked if they've undergone any medical examinations or testing specifically related to asbestos exposure, 86% of respondents said "No."

Have you undergone any medical exams or testing specifically related to asbestos exposure?

2

Demographics

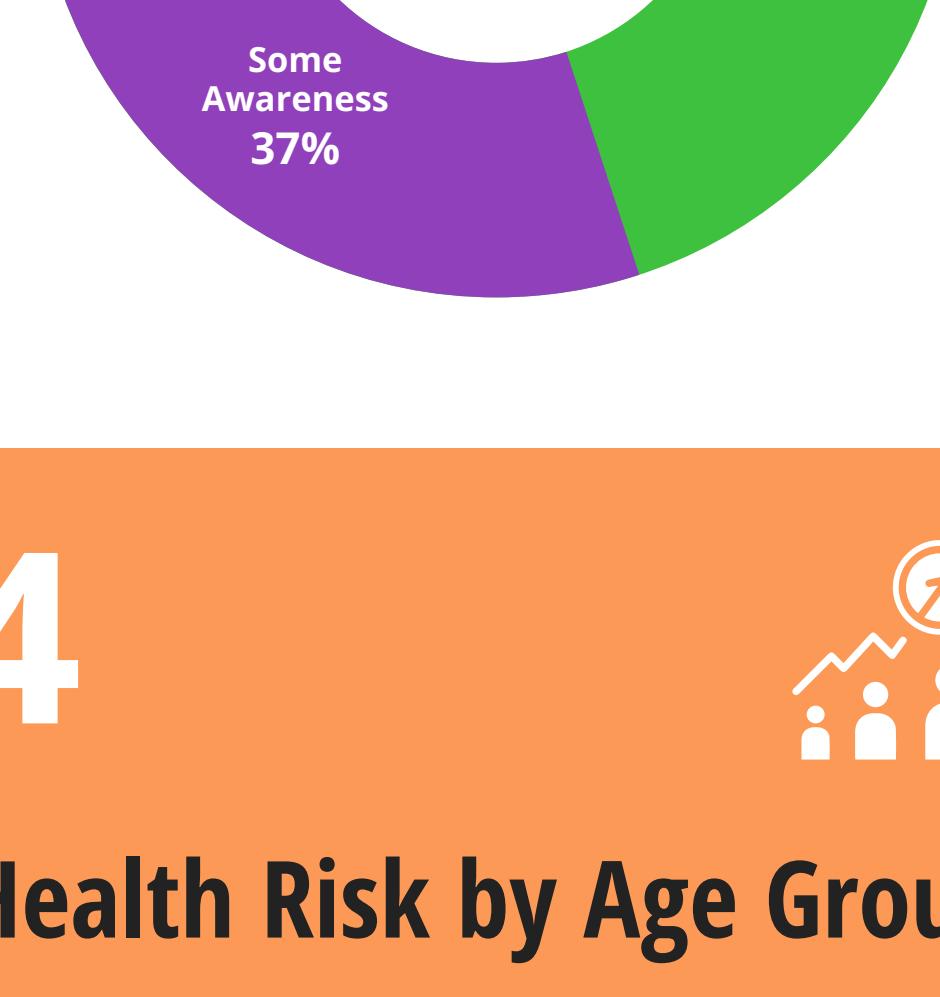

Across demographic categories, survey results showed that key groups, Boomers, Gen X, Millennials, and Gen Z, had a low rate of testing for exposure, with Boomers testing the least.

3

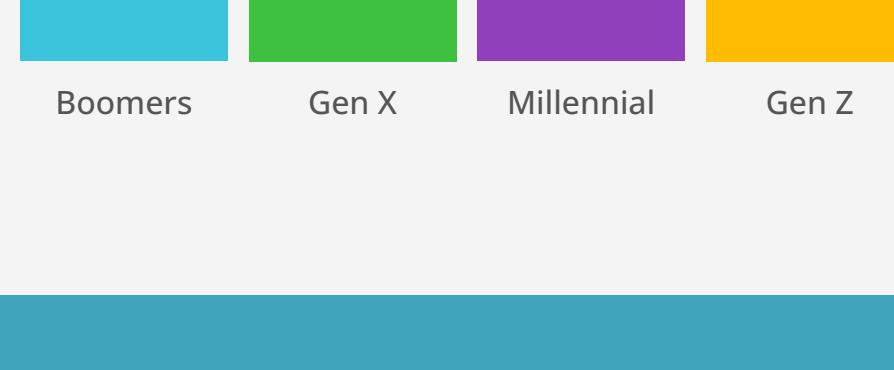

Health Risk Awareness

When asked how aware they were about health risks of asbestos exposure, 55% said they either had no awareness, or some awareness but could use more education.

How aware are you of the health risks associated with asbestos exposure?

4

Health Risk by Age Group

In general, all age groups showed little or no awareness of the health risks associated with asbestos exposure, particularly Gen Z at 70% low awareness.

5

Health Risk Concerns

Despite having some low awareness of the health risks of asbestos exposure, a clear majority of respondents (64%) expressed concern and worry over the health risks.

How aware are you of the health risks associated with asbestos exposure?
